In some applications, the direct-current generator retains an advantage over the alternator-rectifier in that it can operate as a motor as well, reversing the direction of power flow. An alternator, by contrast, must be fitted with a more complex rectifier-inverter system to accomplish power reversal.

An important class of direct-current generators are the dynamos - these are electrical machines with commutators to produce unidirectional (DC) current, and are self excited - their field electromagnets are powered by the machine's own output. Other types of DC generator use a separate source of direct current to energize their field magnets.
